

# Coronavirus disease (COVID-19)

## Situation Report – 204

Data as received by WHO from national authorities by 10:00 CEST, 11 August 2020

### Highlights

Nearly 20 million cases of COVID-19 have now been recorded. WHO Director-General Dr Tedros stressed that behind these statistics there is a great deal of pain and suffering. He emphasized that [‘There are two essential elements to addressing the pandemic effectively. Leaders must step up to take action and citizens need to embrace new measures...My message is crystal-clear: suppress, suppress, suppress the virus’](#).

Dr Tedros sent a message of solidarity to the people of Beirut in the aftermath of the massive explosion which killed over 150 people, injured more than 6000 and made over 300 000 people homeless. [‘To the people of Beirut, the health workers and emergency workers on the ground, our thoughts are with you and we will continue to support you’](#), he said. WHO has sent surgical and major trauma supplies and personal protective equipment worth US\$1.7 million, as well as providing support to mitigate the impact of COVID-19, address psychosocial needs and facilitate the rapid restoration of damaged health facilities. WHO has issued an appeal for US\$76 million in support of this work.

[A large shipment of medical respirators, medical masks, goggles and gowns –worth €1.1 million – was recently delivered to the Republic of Moldova](#). The shipment was funded by the European Union and procured by WHO to help health care workers respond effectively and safely to the COVID-19 pandemic.

Young people have an important role to play in the COVID-19 pandemic, both in terms of reducing transmission and in engaging in the response. Tomorrow we celebrate International Youth Day. This is explored in the [‘Subject in Focus’](#) below.

### Situation in numbers (by WHO Region)

Total (new cases in last 24 hours)

Globally	19 936 210 cases (216 033)	732 499 deaths (4 268)
Africa	903 249 cases (7 553)	16 985 deaths (272)
Americas	10 697 832 cases (106 903)	390 850 deaths (2 277)
Eastern Mediterranean	1 657 591 cases (13 232)	43 878 deaths (445)
Europe	3 606 373 cases (21 315)	217 278 deaths (267)
South-East Asia	2 691 452 cases (58 679)	54 633 deaths (956)
Western Pacific	378 972 cases (8 351)	8 862 deaths (51)

## Subject in Focus: Celebrating International Youth Day and the positive contribution of young people in the COVID-19 response

In addition to its human cost, the COVID-19 pandemic is impacting economies, employment, education and health systems. As a result, young people around the world are being confronted by new challenges and uncertainty. In spite of this, stories of resilience, innovation and solidarity are emerging daily where young people have embraced the opportunity to contribute to the COVID-19 response.

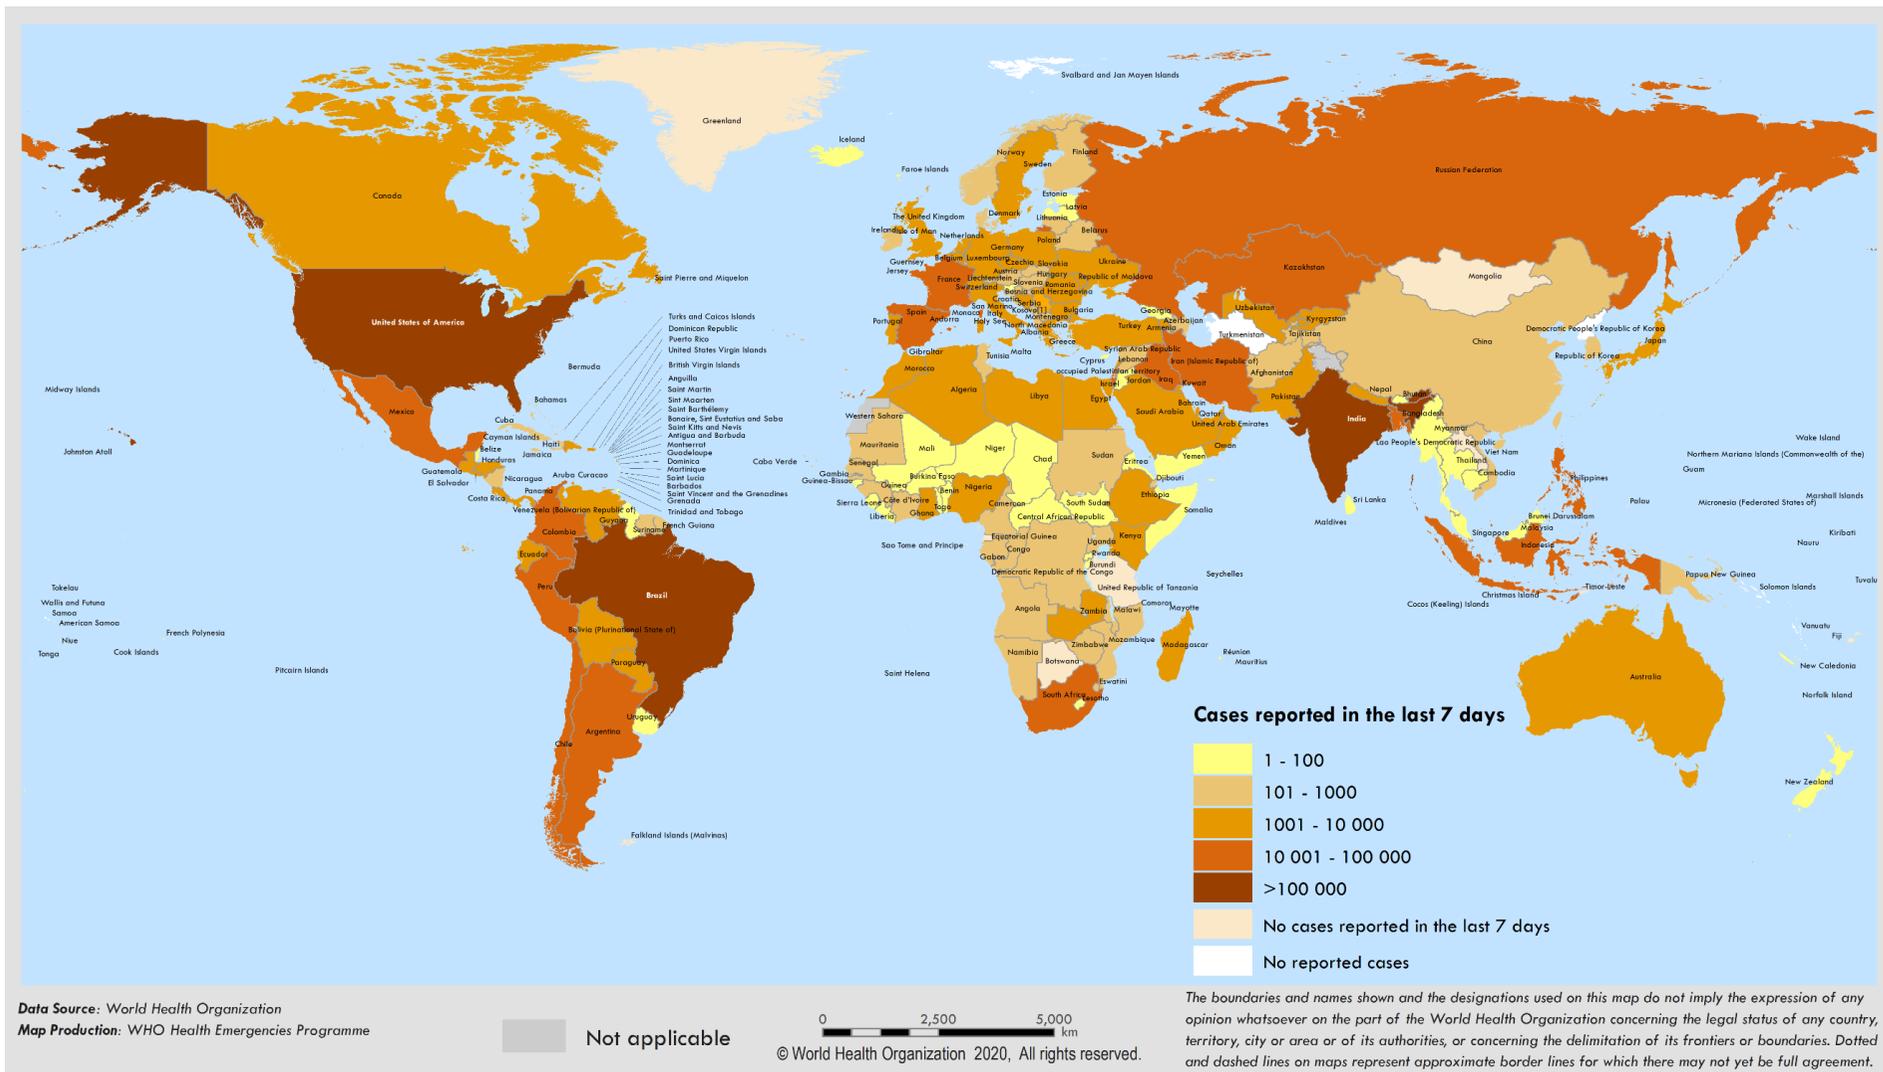

The burden of severe disease has been much higher on older people than on young people. However, young people may be exposed to certain situations and activities that are known to increase the risk of COVID-19 transmission. These scenarios have been referred to as the '[three Cs](#)' - crowded places, close-contact settings and confined and enclosed spaces. Examples include poorly ventilated gyms or indoor restaurants; nightclubs; or large gatherings where physical distancing cannot be maintained. Situations where all three C's are encountered simultaneously are considered the highest risk for COVID-19 transmission. Young people are also able to transmit the virus to vulnerable people – people older than 60 years and/or with underlying medical conditions.

It is the responsibility of each person, whether young or old, to understand the risks associated with certain situations and activities and to make personal decisions that protect their health and prevent the spread of COVID-19. This includes avoiding the 'three Cs'. Young people in many settings have been leaders in their communities and among their peer networks in promoting access to information, combatting misinformation and translating and disseminating public health information. Not only is this enabling young people to make decisions that save lives and protect health, but it is helping to counter a growing culture of blame, stigma and discrimination. International organizations, national health authorities and other trusted networks for information-sharing have a collective responsibility to increase access to the right information and promote understanding about risk and transmission.

On 12 August, the world celebrates [International Youth Day](#), and this year the theme is "Youth Engagement for Global Action". WHO will be highlighting the myriad ways in which young people are engaging at the global, national and local levels and contributing towards the COVID-19 pandemic response. Many young people are working on the frontlines as healthcare providers and other essential workers; youth-led initiatives are striving towards collaboration, solidarity and inclusivity; and others are using the opportunities provided by an unprecedented access to information and digital technologies to communicate and share information. Tomorrow, as part of the International Youth Day activities, WHO and UNESCO will host a [webinar](#) with the participation of Dr Tedros and UNICEF's Executive Director Henrietta Fore, in honor of the young people around the world who have demonstrated their resilience, collective action and creativity in responding to the COVID-19 pandemic.

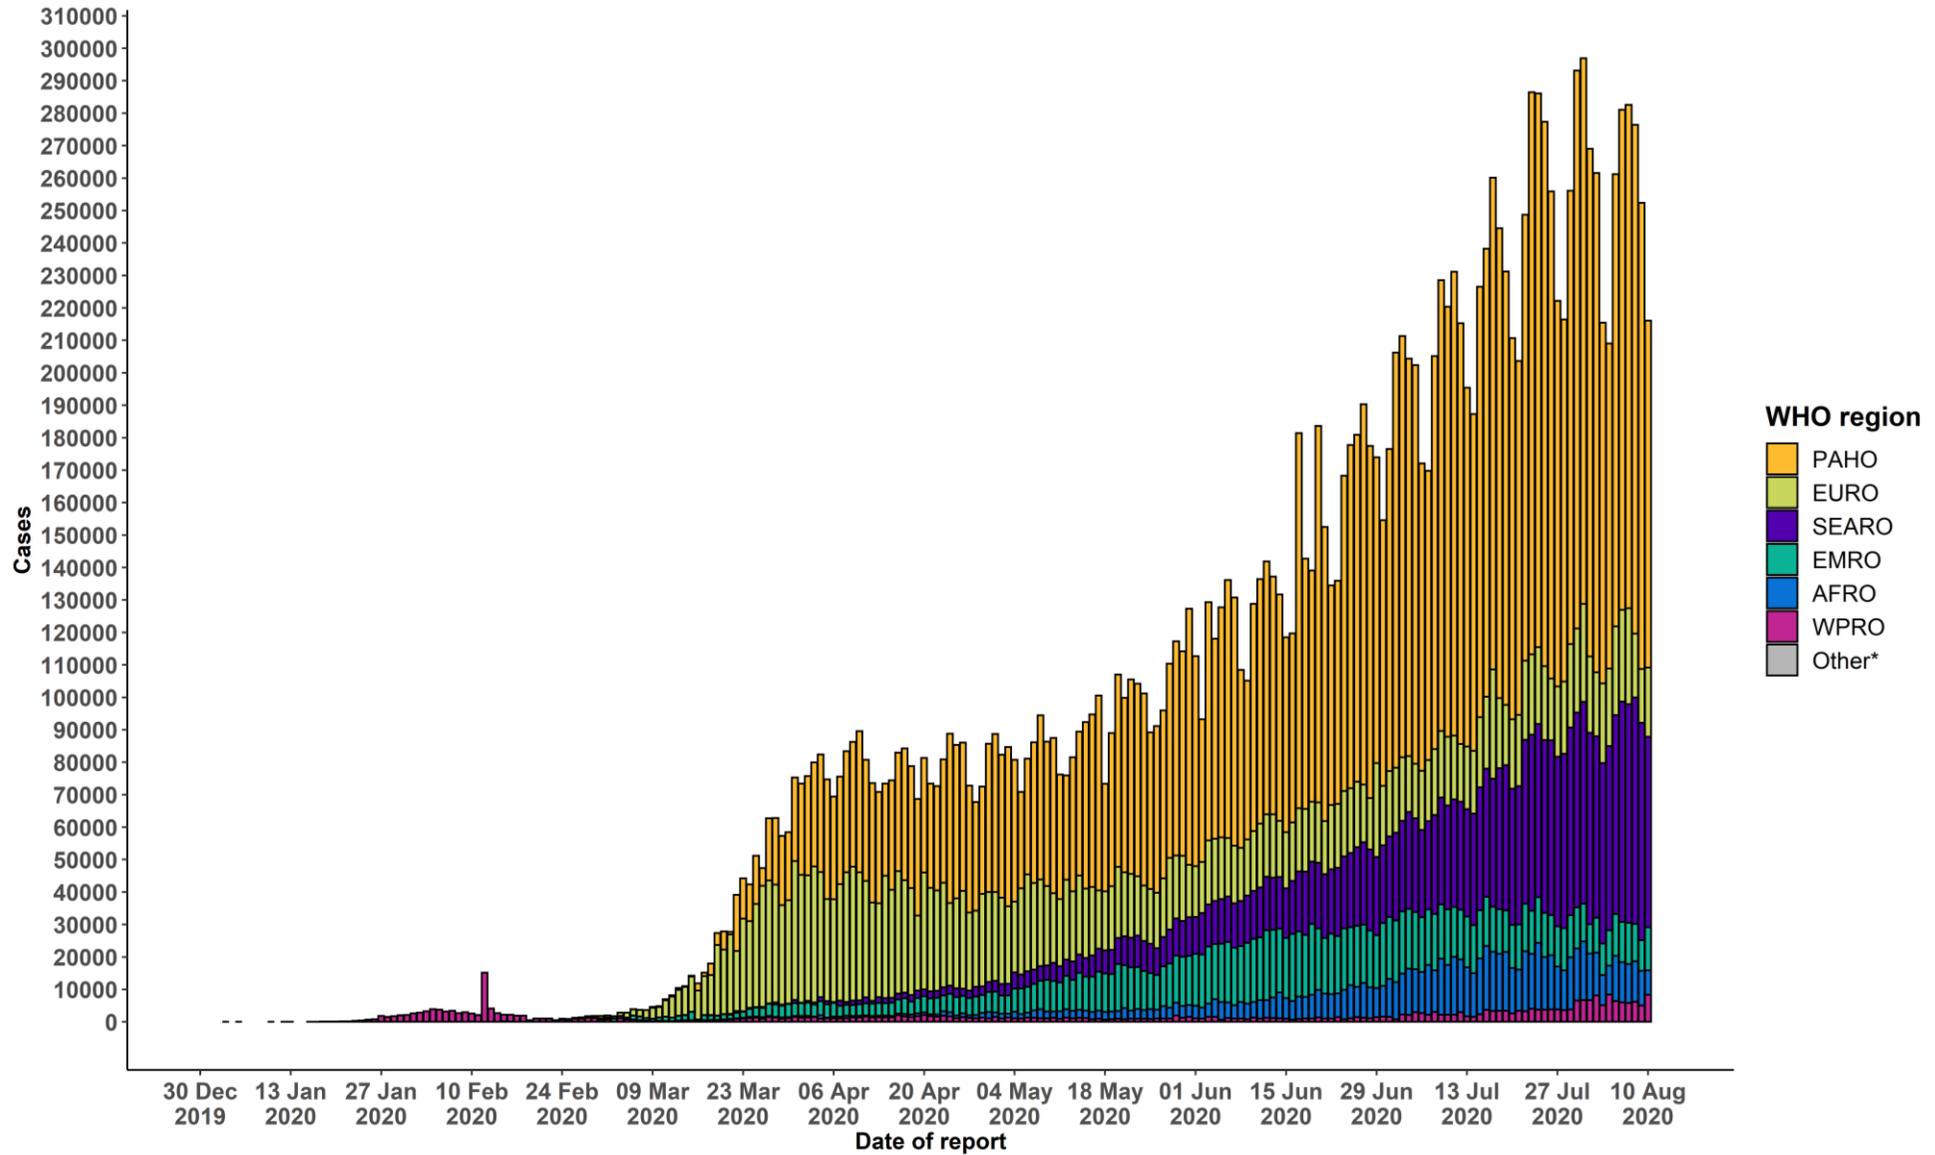

# Surveillance

Figure 1. Number of confirmed\* COVID-19 cases reported in the last seven days by country, territory or area, 5 August to 11 August \*\*

\*\*See [Annex 1](#) for data, table and figure notes.

Figure 2. Number of confirmed COVID-19 cases, by date of report and WHO region, 30 December through 11 August\*\*

\*\*See [Annex 1](#) for data, table and figure notes.

Table 1. Countries, territories or areas with reported laboratory-confirmed\* COVID-19 cases and deaths, by WHO region. Data as of 10 AM CEST, 11 August 2020\*\*

Reporting Country/Territory/Area	Total confirmed* cases	Total confirmed* new cases	Total deaths	Total new deaths	Transmission classification <sup>i</sup>	Days since last reported case

## Case definitions

WHO periodically updates the [Public health surveillance for COVID-19: interim guidance](#) document which includes surveillance definitions.

### Definition of COVID-19 death

A COVID-19 death is defined for surveillance purposes as a death resulting from a clinically compatible illness in a probable or confirmed COVID-19 case, unless there is a clear alternative cause of death that cannot be related to COVID-19 disease (e.g. trauma). There should be no period of complete recovery between the illness and death.

Further guidance for certification and classification (coding) of COVID-19 as cause of death is available [here](#) and [here](#).

---

## Annex 1: Data, table and figure notes

Caution must be taken when interpreting all data presented. Differences are to be expected between information products published by WHO, national public health authorities, and other sources using different inclusion criteria and different data cut-off times. While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change. Case detection, definitions, testing strategies, reporting practice, and lag times differ between countries/territories/areas. These factors, amongst others, influence the counts presented, with variable underestimation of true case and death counts, and variable delays to reflecting these data at global level.

The designations employed, and the presentation of these materials do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement. Countries, territories and areas are arranged under the administering WHO region.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by WHO in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

[1] All references to Kosovo should be understood to be in the context of the United Nations Security Council resolution 1244 (1999). In the map, number of cases of Serbia and Kosovo (UNSCR 1244, 1999) have been aggregated for visualization purposes.

\*A small number of countries/territories/areas report combined probable and laboratory-confirmed cases; efforts are underway to identify these for notation in the data table.†Other: includes cases reported from international conveyances.

Due to the recent trend of countries conducting data reconciliation exercises which remove large numbers of cases or deaths from their total counts, WHO will now display such data as negative numbers in the "new cases" / "new deaths" columns as appropriate. This will aid readers in identifying when such adjustments occur. When additional details become available that allow the subtractions to be suitably apportioned to previous days, graphics will be updated accordingly. Prior situation reports will not be edited; see [covid19.who.int](https://covid19.who.int) for the most up-to-date data.

### Additional table notes

<sup>i</sup> Transmission classification is based on a process of country/territory/area self-reporting. Classifications are reviewed on a weekly basis and may be revised as new information

becomes available. Differing degrees of transmission may be present within countries/territories/areas; classification is based on the highest category reported within a country/territory/area. Categories:

- No cases: with no confirmed cases;
- Sporadic cases: with one or more cases, imported or locally detected;
- Clusters of cases: experiencing cases, clustered in time, geographic location and/or by common exposures;
- Community transmission: experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: large numbers of cases not linkable to transmission chains; large numbers of cases from sentinel lab surveillance; and/or multiple unrelated clusters in several areas of the country/territory/area;
- Pending: transmission classification has not been reported to WHO.

ii "Territories" include territories, areas, overseas dependencies and other jurisdictions of similar status.

#### **Country, territory, or area-specific notes, updates and errata**

- **Update on 11 August for Bolivia:** Death counts adjusted retrospectively by national authorities for 9 August.
- **Update on 11 August for The United Kingdom:** Death counts adjusted retrospectively by national authorities on 11 August.
- **Update on 11 August for Netherlands:** Death counts adjusted retrospectively by national authorities from 5 to 9 August.
- **Update on 11 August for Kazakhstan:** Death counts adjusted retrospectively by national authorities from 8 to 10 August.
- **Update on 11 August for Belgium:** Case counts adjusted retrospectively by national authorities from 13 April to 10 August.
